To Whom It May Concern

A letter of reference for **Mr Romain Gautron**

I have known Mr Gautron for one semester in academic year 2016/2017 – he took the module “Pattern Recognition and Neural Networks” which I teach for the Computer Science degree at the School of Computer Science, Bangor University, UK. I came to know Romain as he stood out of the class, first with his impeccable attendance record. As his study did not include MATLAB prior to this module, he had to use a programming language of his choice to complete the coursework. This made the module harder to him compared to the rest of the class. I was delighted and impressed with Romain’s work. He was capable of grasping quickly intricate concepts and converting them into practical solutions. His advanced programming skills complemented by his academic ability and curiosity enabled him to achieve a 100% mark in this module. The presentation of his work was also exemplary, with a great attention to detail. I wish I had more students like Romain in my class.

Romain is an excellent candidate for postgraduate studies and a future research career.

Ludmila Kuncheva

Professor of Computer Science
School of Computer Science, Bangor University
Dean Street, Bangor, Gwynedd LL57 1UT
